TECHNICAL SKILLS

- React
- Next.js
- React Native
- Expo
- HTML
- CSS
- Tailwind CSS
- Bootstrap
- Flask
- NodeJS
- ExpressJS
- NestJS
- Prisma
- JWT
- MySQL
- MongoDB
- PostgreSQL
- Git
- Postman
- Jira
- Figma
- Docker
- Turborepo
- Vercel
- Render
- Neon
- LLM APIs (OpenAI, Gemini)
- Python
- JavaScript
- TypeScript
- C
- C++

SUMMARY

Full-stack software engineer who ships production platforms end to end — Next.js frontends, NestJS APIs, and PostgreSQL data layers — with payment integrations, real-time features, and AI-powered products deployed on Vercel, Render, and Railway.

PROJECT EXPERIENCE

May 2026 - Current

Fullstack Software Engineer AI-Daily-Living

- Developed and deployed a full-stack AI productivity suite (eight feature modules across an AI Daily-Living toolkit and a Life OS) using Next.js 16 (App Router, React 19), a NestJS 11 REST API, and PostgreSQL with Prisma in a Turborepo monorepo.
- Engineered JWT authentication in httpOnly cookies behind a Backend-for-Frontend proxy (first-party cookies, no CORS), with role-based admin access and a user-management dashboard.
- Integrated the Google Gemini API to power a recipe generator, weekly meal planner, and weather-based outfit recommender (keyless Open-Meteo forecast and geocoding), all locale- and timezone-aware per user.
- Built a Life OS suite: a Notion-style markdown wiki (toolbar editor, live preview, tags, search), a goals/finance/health/habit dashboard, and a job-application tracker.
- Deployed to Vercel, Render, and Neon with automated Prisma migrations, per-user rate limiting, Dockerized local Postgres, and a polished shadcn/ui + Tailwind CSS interface (dark mode, skeletons, toasts).

April 2026 - May 2026

Fullstack Software Engineer ChefMDRX

- Built a subscription-based nutritionist meal-planning platform where clients fill out an assessment form and book a consultation schedule, on a Next.js, NestJS, and PostgreSQL stack.
- Developed the Research & Development staff workflow to confirm consultations, assign each client an appropriate meal plan, and dispatch it to the kitchen for cooking.
- Integrated Xendit for subscription payments and Resend for transactional email such as booking confirmations and status updates.
- Implemented free meal-delivery scheduling tied to active subscriptions and assigned meal plans.
- Deployed the backend on Railway and the frontend on Vercel.

May 2025 - May 2026

Full Stack Developer Geriatric Care Solutions

- Developed and deployed a full-stack caregiving platform supporting caregiver booking, elderly engagement activities, and AI-powered recreational tools.
- Built responsive landing pages, caregiver application workflows, and a blog management system for client content publishing.
- Implemented AI-driven elderly activities including crossword generators, Story Recall, Story Weavers, and paint-by-numbers generation from uploaded images.
- Engineered the 'Memoirs' feature, a multi-step AI-assisted storytelling system with auto-save, resume-anytime functionality, progress persistence, and AI-generated follow-up questions.
- Integrated the OpenAI API to generate personalized memoir books from user responses and family stories.

April 2025 - November 2025

Full Stack Developer Matchderport

- Designed and developed a full-stack e-commerce platform featuring product listings, booking system, and a user community discussion module to enhance customer engagement.
- Built and integrated core frontend and backend functionalities, including product pages, user interactions, and dynamic content management.
- Implemented a structured system for user-generated discussions, improving platform interactivity and community engagement.

- Delivered a responsive and user-friendly interface optimized for seamless experience across devices.

February 2025 - June 2025

Full Stack Developer Anura Innovations

- Contributed to the development of a hospital referral system enabling secure patient transfers and medical information sharing between healthcare institutions.
- Engineered and architected portions of the system ERD to support scalable patient, referral, and hospital data management workflows.
- Developed frontend workflows for patient referral processing, medical history viewing, and referral status tracking.
- Integrated authentication and patient management features including outpatient monitoring, admitted patient tracking, and delivered patient records dashboards.
- Collaborated on building healthcare-focused workflows that improved continuity of care and streamlined hospital coordination processes.

EDUCATION

2025

BS | Computer Science

Mindanao State University - Iligan Institute of Technology, Iligan City, Lanao del Norte

Organizations/Awards: Computer Society (ComSoc)
